VIA NIRONE 7 XENON 10sp

Via Nirone 7 Xenon 10sp with a new nude look

You fell in love with cycling and bicycles will always charm you. You have only one doubt: is this your life long passion? Is it right to invest a considerable sum of money? The team of engineers of Bianchi thought just about you with the Bianchi Via Nirone. A high-tech Bianchi bicycle recommended for those who want to approach great cycling with good technical guarantees. You can easily realize it by looking at the frame.

Tube profiles are typical of Reparto Corse where the bicycles of champions are made; that's why this stiff and light bicycle offers a high-level of performance. The Via Nirone handles and is quick in turns and acceleration gives you a sense of security. You can easily realize the qualities of this quick frame made from 7000 series aluminium alloy. What you need is to stand up on the pedals, push strongly and enjoy the euphoria that only an excellent frame can give. The geometry is relaxed, allowing the trunk not to bend too much.

The handlebars guarantee total control and the legs comfortably push on the cranks. If riding on the flat is not very exciting, things will immediately change on the very first climb as you will easily get to the top. The twopiecechainset is stiff allowing excellent power transfer. This bicycle gives you confidence even on the descent: a strong fork; well-balanced front end; the possibility to turn without oversteering or stressing the brakes. The stability of the frame guarantees security.

You needn't correct the direction, so you can just have fun. You can easily change the direction without pushing excessively on the handlebars. That is really an extraordinary feeling from the very first ride. Components are well-balanced. The Via Nirone 7 Xenon 10sp bicycle is equipped with a world preview of Campagnolo Xenon group 10 speed and new wheels polish Ursus Countach.

Via Nirone 7 Xenon 10sp

The futuristic design of Bianchi Via Nirone 7 leaves speechless. Its charming nude style allows you to make yourself conspicuous like Danilo Di Luca. The original jersey of the 2006 Liquigas team is for free for all those who will choose the Bianchi Via Nirone Xenon 10sp.

Materials and structure

The revised tube thicknesses give a high performance/weight ratio to this frame constructed from aeronautic grade 7000 series aluminium alloy (with a tensile strength of 450N/mm² and a specific density of 2,7kg/dm³). Double- and triple-butteted tubing have an exclusive design from Bianchi Reparto Corse. The smooth TIG welding gives an excellent aesthetic finish, as well as, avoiding extra strain in the most stressed areas of the frame. A special anti-corrosion surface treatment, carried out before painting, ensures long term durability.
